- **Global Health Advisory**

On August 6, 2020, in close coordination with the U.S. Centers for Disease Control and Prevention (CDC), the Department of State lifted the Global Level 4 Health Advisory. For more information visit: <https://www.state.gov>.

- **Executive Order N-33-20**

On August 28, 2020, California introduced a blueprint for reducing COVID-19 in the state with revised criteria for loosening and tightening restrictions on activities by counties. This blueprint included a health equity metric to be used along with other metrics to determine a county's tier. ## Situation Cell Incident Report

Late November Public Safety Power Shutoff

November 26, 2020 - 1530 hours

Report No. 02

### **Incident Summary**

A significant dry wind event will bring high risk fire conditions to portions of Southern California. Southern California Edison, and San Diego Gas and Electric have activated PSPS protocols due to elevated fire conditions.

### **Confidentiality Notice**

This document is for the sole use of the intended recipient(s) and may contain confidential and privileged information. Any unauthorized review, use, disclosure, or distribution is prohibited without the express written consent of the Cal OES Executive Office.

**Situation Cell Overview**

Elevated fire weather conditions are expected through today over the southern California Mountains, Santa Barbara coast and Santa Clarita Valley and portions of San Diego where winds will locally be gusty up to 45 mph and humidity will remain low. Offshore winds will increase statewide Thursday into Friday creating elevated to critical fire weather conditions with a moderate Santa Ana wind event (up to 50 mph) Thursday night into Friday, with the strongest winds expected Friday.

**Key Points**

- SCE and SDG&E have notified Cal OES that they at Activating PSPS Protocols/Potential to De-energize PSPS Stage.
- The strongest winds of the season could cause damage to trees and power lines.
- Critical fire weather conditions could lead to rapid spread of any new fires.

**Potential Impacts**

- High winds in combination with dry surface fuels bring critical fire weather conditions.

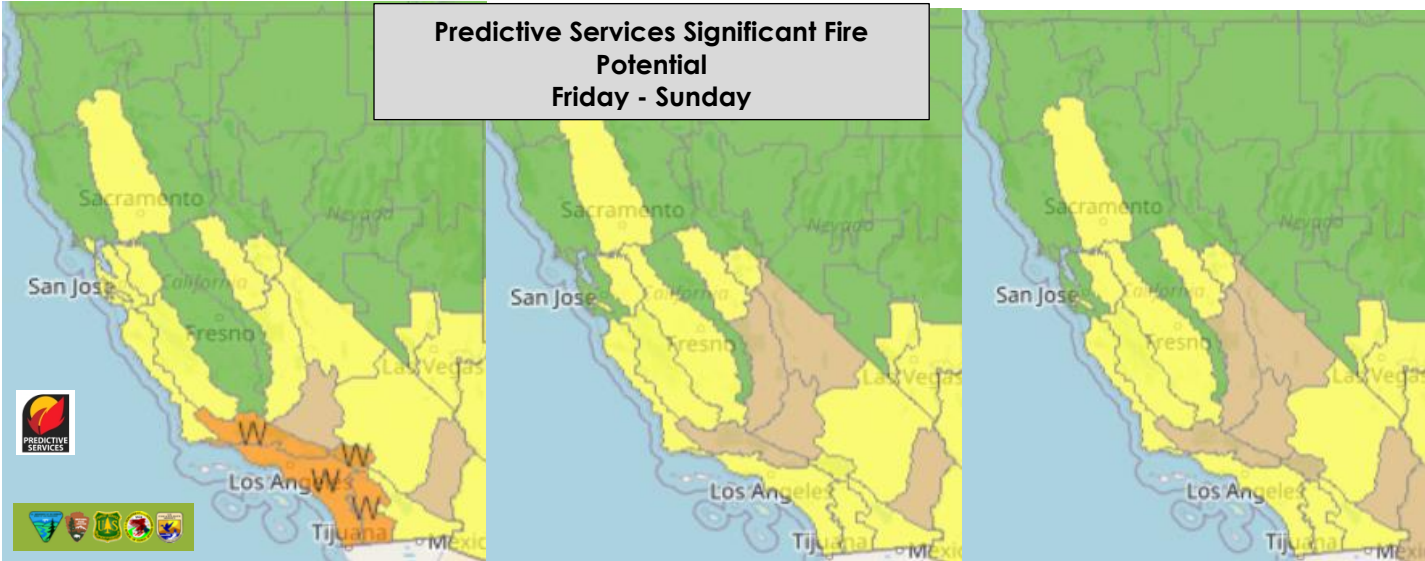

**Weather**

**Northern California Geographical Coordination Center (Northern GACC):**

Fuels indices have moderated quite a bit in the past two weeks due to occasional precipitation and long cool, humid nights with strong inversions. However, in many areas indices are still not quite to seasonal normal levels. A few local spots in the central and southern Sacramento Valley and foothills and lower elevations of the Bay Area have only received very light rain and remain drier. These areas would be more vulnerable to fire spread during windy conditions.

**Southern California Geographical Coordination Center (Southern GACC):**

Widespread strong offshore winds along with very low humidity will bring a “High Risk” for large fire to much of Southern California Thursday through Saturday. Rapid rates of spread and long range spotting will be likely on new ignitions in windy areas. The large fire threat will decrease significantly across Southern California Saturday through Monday as offshore winds become local. The large fire threat may become high across Southern California once again starting Tuesday depending whether another Santa Ana wind event develops.
